

Hello,

My name is Vlad Yakovenko, and I'm writing to express my interest in a backend/Python developer position at your company. With over 8 years of professional experience, I have built scalable backend systems, RESTful APIs, data pipelines, and cloud-native services especially using Python, Django / FastAPI, AWS, Docker, and CI/CD practices.

During my career I have:

- Designed and implemented ETL pipelines and data processing workflows;
- Developed web applications with real-time updates (Dash / Flask);
- Managed deployments on cloud infrastructure (AWS ECS);
- Worked remotely in asynchronous teams, using tools such as Slack, GitHub, Jira, and more to maintain productivity and clear communication.

I currently live in Thailand (UTC+7), and have been working remotely for many years — I'm comfortable collaborating across time zones and using asynchronous workflows effectively. I'm actively looking for a role where I can contribute my backend, data, and cloud experience to build robust and maintainable systems.

I believe my skills and background make me a strong match for a backend engineering role in a remote-first or distributed team. I would welcome the opportunity to discuss how I can contribute to your projects.

Thank you for your time and consideration.

Best regards,

Vlad.
